Project info available @
www.gordontrinder.com

Dynamic and hands-on engineer with a strong background in embedded software, control systems, and mechatronic design. Experienced in developing integrated hardware and software solutions for automation, robotics, and sustainable technologies. Adept at leading multidisciplinary teams, optimising engineering processes, and delivering robust control systems across fast-paced environments. Returning to full-time engineering following a year of independent technical projects and travel.

PROFESSIONAL EXPERIENCE

Senior Embedded Systems Engineer

Vertical Future | August 2022 - August 2025

- Led the development and integration of control software for automated vertical farming machinery, including robotic systems, seeders, conveyors, and process-handling equipment.
- Implemented industrial control software in Python for mid-level automation, integrating 8 subsystems.
- Expanded the Embedded Systems team from 2 to 5 engineers, mentoring staff and streamlining cross-functional collaboration.
- Conducted extensive on-site testing, software validation, and troubleshooting of automation control systems.
- Managed PCB production, maintained the internal server, and enhanced documentation and maintenance procedures.

Mechatronics Engineer

ALP Technologies | April 2021 - July 2022

- Developed and prototyped mechanical, electronic, and software components for a scalable battery management and IoT monitoring system.
- Delivered a full IoT sensing project from concept to prototype - including electronic design, Altium PCB layout, fabrication, and bench testing.
- Implemented embedded firmware and software in C++ and Python, enabling data exchange and edge-device communication via MQTT.

SABBATICAL

- Designed 4 layer PCB interface between OEM audio amp, SMPS and DSP for active speaker application
- Upgraded solar installation @ off-grid community
- Delivered workshops @ Indian hackathon event
- International Bikepacking Expeditions

EDUCATION

MSc Applied Mechatronic Engineering

Harper Adams University | 2019

Distinction

MEng Electrical & Electronics Engineering

University of Edinburgh | 2013 - 2018

2:1

SKILLS & PROFICIENCIES

Programming & Software:

Python • C++ • MATLAB • Git • Linux

Embedded Systems & Control:

PLC Programming • Modbus • RS485 • MQTT

Electronics & Hardware:

Circuit Design • PCB Layout • Hardware Prototyping • Soldering & SMD Rework • Debugging • PCBA Manufacture

Tools & Platforms:

Altium Designer • KiCAD • Jira • Notion

Soft Skills:

Cross-functional Collaboration • Process Optimisation • Technical Mentoring • Hiring • Emotional Intelligence

INTERESTS

- Cooking
- Cycling
- Dancing
- Repair - Clothes, Electronics, Bicycles

AUTOMATION & HARDWARE ENGINEER
